

A scatter plot showing the relationship between Right Ascension (R.A.) on the x-axis and a value labeled $-1.06e2$ on the y-axis. The x-axis ranges from -0.04 to 0.02, and the y-axis ranges from -0.04 to 0.04. The data points are categorized into three distinct groups based on color: blue, orange, and red. The blue points are primarily located in the upper half of the plot, with R.A. values ranging from approximately -0.04 to 0.025 and $-1.06e2$ values from 0.01 to 0.04. The orange points are concentrated in the lower half, with R.A. values from -0.04 to 0.02 and $-1.06e2$ values from -0.04 to 0.01. The red points are clustered in the lower right, with R.A. values from 0.00 to 0.02 and $-1.06e2$ values from -0.03 to 0.00. There is a small overlap between the orange and red clusters in the lower right region.
